

E435
DE(19)
E438
base?

E447
400 gcl
base of gcl = AS 1.5 Ld 1.5 Ag 1
Ld³As/Ag 1 - Dg⁺Dh trace w/ sand
Why does base look like a gcl
base?

gcl DE(19)
Ld³As/Ag 1 - Dg⁺Dh trace w/ sand
Why does base look like a gcl
base?

E458
420 m/gc
wedge of DE10
upper contact slightly disturbed by burrow
lateral count 152-DE9-10
burrows in m/gc:
(no burrows occur in m/gc's higher in section => lake shallower at this time?)

DE(10)
430 d1
375 sd
405
gcl
d1 debris layer of DE10 Ld²/As/Ag 2/Dg
sand is clean: 75% f 25% m
10.5mm slice from 1/2 of core
2N,1L,1H,1T,B,R,S
3985 ± 55
AA-20182 31.8mg - 27

E475
440
msu unit bounded by gels
As/Ag 2⁺, Ld 2⁻
laminated, lams = 2 p (1mm th.)
msu unit caused by turnover of lake?
Severely eroded lower contact
more of msu unit which was eroded.

E477
E479
E454
450
m/gc wedge of DE-11
g. organic detrital clump
Ld³2⁺As/Ag 1 Dg⁺
Ld²2, Dg 1, As/Ag 1 (darker than gels above)
burrows in m/gc:
no burrows in wedge high in section: lake shallower at this time?

DE(11)
450
faint laminations in otherwise msu unit
faint laminations throughout this unit
lams = 2-3 Pd

E493
DE(12)
460
gcl
gcl for DE-12 Ld³2 Dg 1 As/Ag 1
d1 detrital layer Ld³2 Dg 1 As/Ag 1
AS 2 Ag 2 Dg 1
in core E, this core strongly resembles ARN96-20.
unusual texture: silt + clay + detritus > 0.1 mm (no Ld)
porous structure here is typical of DEs w/ opt sand - eg DE 11 & 12 in BR95 BB
also like detrital layer in DE 13 ha

E499
470
prominent gcl
AR N 96 - 21 402cm 17.9mg
8mm slice from 1/2 of core
20,1H,1N,1B,R,5,T,L,I
3815 ± 50 BP
AA-20181
AR N 96 - 24 457cm
10mm slice from 1/2 of core
96-25?

E507
470
prominent gcl
